

Research Scientist/Project Manager

QualTek is seeking a qualified individual who can assume a Research Scientist/Project Manager role in its Newtown, PA facility. The ideal candidate is a person who takes pride in everything they do, is well organized, pays attention to detail and can handle more than one task at a time. You should also have good communication and computer skills. Willingness to work hard, meet deadlines and stay on top of all projects and duties you are responsible for is crucial. QualTek is a small company that prides itself on teamwork, thus good interpersonal skills are a must. Ability to work well independently as well as in a group is also very important.

Principal Duties and Responsibilities:

Project management responsibilities including designing and conducting laboratory experiments, maintaining appropriate study documentation, coordinating with various departments for test and control slides in addition to patient samples. Staining tissue samples using immunohistochemistry (IHC) techniques. Scoring samples or coordinating the scoring of samples with appropriate personnel, writing reports detailing scoring data and experimental results for customers (study sponsor).

Support of the Study Director throughout the duration of a project, including sponsor and study director updates for purposes of technical coordination of project requirements, developing study design, assisting with proposal writing, teleconferences and on site meetings with clients. Provides direction and oversight to laboratory personnel assigned to assist in execution of project responsibilities.

Qualifications:

Requirements

- Minimum of a Master's degree with emphasis in molecular biology, cell biology, and/or pathology
- Prior lab experience required, we will consider experience in college if the techniques and coursework are applicable to this position
- Must be able to write detailed reports
- Excellent lab technique
- Professional manner handling clients and meetings
- Meticulous attention to detail and ability to focus, prioritize, and multitask
- PC knowledge & Windows OS experience
- Good listening, oral and written communication skills
- Must have strong interpersonal and organizational skills
- Able to legally perform duties within the United States without restrictions
- No disqualifications for employment in the US lab industry as determined by the Federal Government

Preferred

- PhD candidates will also be considered
- Experience in IHC, biomarker research, RNA ISH / FISH or histology
- Familiarity with an automated IHC platform, e.g. Dako, Ventana or Leica
- Background in a GLP or CAP/CLIA accredited laboratory or other clinical setting

A cover letter is required with your resume. We want to evaluate your writing skills and style and understand how you as a candidate can fit in with our growing organization. Salary history and references will be required for the successful candidate.

Company Background

QualTek Molecular Laboratories is a contract research biomedical laboratory that works with major pharmaceutical, biotech companies, and academic research departments in the areas of oncology, inflammatory diseases, as well as other disease states. QualTek's expertise in IHC, a method of visualizing and localizing proteins in tissues, has uses in almost all areas of biomedical research from basic R&D through clinical trials and advanced patient screening to commercial product inception. We are at the forefront of the effort assisting our customers (study sponsors) in identifying new biomarkers for disease diagnosis, disease detection and treatment.

No calls will be accepted regarding this position. There will be no auto reply to applications sent; if you are selected to be interviewed you will be contacted via phone or email.
